

DOROJATUN CHANDRABUMI

SOFTWARE ENGINEER

ABOUT ME

Front End Developer with 5 years of experience building scalable, responsive web applications and reliable user interfaces. My core focus is JavaScript and TypeScript, working extensively with React, Next.js, and Vue to turn complex requirements into clean, maintainable code.

Lately, I have been exploring how agentic AI can enhance existing software architecture and streamline business workflows. I actively experiment with integrating practical AI patterns like RAG, Hermes, and RIG into production systems, bridging the gap between everyday frontend engineering and intelligent automation.

PROGRAMMING

Language

- Typescript
- Javascript
- HTML
- CSS
- SCSS / SASS
- PHP
- Python

Frameworks

- React.js
- Next.js
- Vue.js
- Tailwind CSS
- jQuery

AI & Agentic

- LLM API Integration
- RAG (Retrieval Augmented Generations)
- Hermes
- RIG

EDUCATION

Brawijaya University

Bachelor's of Science Computer

- Enrolled since July 2016 and Graduated on July 2021

CAREERS

Frontend Web Developer

PT MSBU Konsultan (Placed at Lion Parcel)

Jul 2026 - Present

Frontend Web Developer

PT Brilliant E-Commerce Berjaya /

Mbizmarket.co.id (Full Time)

Oct 2024 to Jul 2026

Frontend Web Developer

PT Bukit Makmur Mandiri Utama

Oct 2022 to Oct 2024

Frontend Web Developer

Ajita Digital Agency (Contract)

Nov 2021 to Oct 2022

Web Developer

PT Angkasa Pura 2 (Persero) KCU Soekarno

Hatta (Internship)

Jul. 2019 to Sept 2019

PROJECTS

SYS Law and Partners (syslawpartner.com)

Designed and developed a responsive law firm company profile website to present firm information, services, and brand identity. I collaborated closely with a UI/UX designer to translate design concepts into a polished, production-ready web experience. My responsibilities included frontend development, performance optimization, and deployment. The website was deployed on Vercel and configured with a custom domain to ensure reliable hosting and smooth delivery for the client.

CAREER SUMMARIES

MSBU Konsultan (Placed at Lion Parcel)

(Frontend Web Developer)

At Lion Parcel, I contributed to the development and maintenance of GENESIS, a web-based logistics platform supporting the company's daily operations. The platform brings together shipment booking, tracking, cargo operations, partner management, and financial workflows, helping internal teams manage shipments from order creation through delivery.

My work focused on building and improving frontend features using Vue.js and TypeScript, translating operational requirements into practical user interfaces. This included developing forms and data tables, integrating backend APIs, and handling validation and application state across complex shipment workflows. I also maintained existing features and resolved issues affecting day-to-day use.

Working within the project's Clean Architecture structure, I contributed to reusable components and kept UI behavior separate from business logic and API integration. This approach helped maintain consistency across modules and made ongoing changes easier to manage as operational requirements evolved. Through this work, I helped develop and maintain the tools Lion Parcel's teams rely on to process shipments, access operational information, and support customers and business partners.

Tech Stack: Vue.js 3, TypeScript, JavaScript, Vuex, Vue Router, PrimeVue, Tailwind CSS, Axios, REST APIs, Jest, Vue Test Utils, Git.

Mbizmarket.co.id

(Frontend Web Developer)

At Mbizmarket.co.id, I contributed to the development and maintenance of the company's e-procurement platform, including its B2G (Business-to-Government) initiative under mbiz.co.id. My work focused on modernizing legacy systems, building scalable features, and reducing technical debt to improve long-term maintainability and performance.

I led the revamp of legacy PHP modules into Next.js, implemented government-related integrations, enhanced tax and transaction workflows, and improved company profile management. I also strengthened system reliability through error tracking implementation, dependency refactoring, and migration to the latest Next.js App Router architecture.

For the B2G business line—where Mbiz directly supplied procurement goods to government institutions—I was entrusted with developing an Odoo inventory and warehousing integration using Python. The integration extracted procurement and warehouse stock data from Odoo, transformed it into structured reporting datasets, and generated Excel-ready outputs for weekly C-level (NMV) meetings. These reports enabled executives to monitor stock levels and warehouse distribution across multiple locations, supporting data-driven operational and supply chain decisions.

Through these initiatives, I played a key role in improving user experience, internal reporting visibility, and ensuring sustainable system architecture.

Tech Stacks: Next.js, React.js, TypeScript, Tailwind, JavaScript, PHP, Phalcon Framework, GIT, Python (Odoo Integration)

CAREER SUMMARIES

Bukit Makmur Mandiri Utama

(Frontend Web Developer)

At BUMA, I was responsible for developing and maintaining internal applications that supported procurement, inventory, and pricing workflows. My work focused on building scalable solutions with Vue.js 3, Vuex, and TypeScript/JavaScript in an Agile environment, often leveraging micro front-end architecture to deliver modular and maintainable systems.

Key contributions included transforming SAP MIGO transactions into a modern web application, creating an inventory monitoring dashboard, delivering a price list management application, and developing a procurement contract management and reporting system. These initiatives helped improve accessibility, efficiency, and scalability across the company's operations.

Through these initiatives, I helped enhance operational efficiency, improved system accessibility, and contributed to long-term application scalability within the organization.

Tech Stacks: Vue.js, TypeScript, SCSS, Azure DevOps, GIT

AJITA Digital Agency

(Frontend Web Developer)

At AJITA, I contributed to various projects for both corporate and non-profit clients, with a focus on delivering responsive, high-performing, and maintainable web applications. My role involved developing new platforms based on UI/UX designs, maintaining existing systems, and modernizing legacy codebases using Vue.js.

Key contributions included developing the official website for The International Nature Loving Association, optimizing the Djarum MLD Points website to improve data transfer speed from microservices, and refactoring the Retinad admin dashboard from vanilla JavaScript to Vue.js.

Through these initiatives, I delivered solutions that improved performance, strengthened maintainability, and provided long-lasting value to clients.

Tech Stacks: Vue.js, JavaScript, SCSS, Laravel

PT Angkasa Pura II

(Web Developer)

During my internship, I developed a web-based internal procurement system using CodeIgniter, based on the company's requirements. The system was designed to generate Surat Usulan Pengadaan (SUP) documents, allowing procurement requests to be automatically exported into Word/Excel formats for validation and signature.

Tech Stacks: PHP, Code Igniter
